

Mobile Diagnostics, Theatres, Treatment and Therapy Services

Contract duration: 08/03/2016–07/03/2020

North of England
Commercial Procurement Collaborative

Background to framework

Various mobile diagnostics solutions were available on the previous framework yet there was a continuous rise in demand for these and other services within acute trusts.

It is important to note the rises in demand for both CT and MRI was outstripping capacity nationally. Therefore the renewal of the framework is to address these issues and introduce more supplier options.

As the rise in demand for these services continues, this contract renewal has been designed to vastly improve framework provision and also has the ability to evolve and increase service capacity / options; this in turn will ensure that service providers are able to deliver a compliant and robust framework contract.

The renewal of the framework is also an opportunity to capture new technologies, and solutions, which can be adopted to provide up-to-date mobile services to support service demands and enable the following:

- Provide coverage between old equipment being decommissioned and new equipment being installed
- Support patient services during emergency situations, where a fixed site becomes inoperable or downtime is required
- Enable service related key targets.

Lots covered

- Mobile Radiology provision
- Mobile Breast Screening
- Mobile Bone Densitometers

- Mobile Diagnostic Ultrasound
- Mobile Lithotripter
- Mobile Operating Theatre Semi-Permanent Construction
- Mobile Endoscopy
- Mobile Units on Trailers
