

# Maintenance Services for Uninterruptible Power Supplies and Generators

Contract duration: 10/10/2012–09/10/2016

North of England  
Commercial Procurement Collaborative

## The problem

Trusts have a common requirement for maintenance services for a range of specialisms, and have historically run their own procurement processes to identify their supplier of choice.

The result is duplicated effort, and a fragmented supplier base with little, or no, commercial benefit derived from collaboration.

## The solution

NOE CPC identified several opportunities to:

- provide a framework to allow trusts an easy route to procure
- maximise collective leverage on commercial terms
- ensure full OJEU compliancy

The service covers:

- Engines
- Acoustic enclosures
- Control panels and metering
- Batteries
- Exhaust systems
- Fuel/oil storage tanks
- Fuel, oil and filters
- Electrical systems and wiring

## Benefits for your trust

### Range of suppliers that meet the appropriate industry accreditations

Suppliers hold ConstructionLine or ECS approval as a minimum requirement.

### Market testing and compliance

Through participating in this agreement trusts can demonstrate that they have robustly market tested this key area, and using the framework allows you to procure these services without the need to go through a formal OJEU tender.

### Value for money

The competitive tender process helps to ensure that trusts are buying services at a competitive market rate which offer significant savings.

## Suppliers

- Dale Power Solutions plc
- Progress Plant (Yorkshire) Ltd
- Robert M Donaldson Ltd
- Winder Power Ltd

Trusts may select any of the individual services they wish to procure, or may wish to procure a range of services.

The appointed suppliers have all provided day rates and material mark up percentages, but in order to establish a cost for your organisation members are advised to run a further competition.

A copy of the detailed specification is available upon request.
